I am pleased to have participated in the 21st Panhellenic Plant Pathology Conference, where I had the opportunity to present my research on the "Evaluation of the Susceptibility of Dry Bean Genetic Material to Virus Diseases."

This study is part of the project titled Sustainable Management of Virus Diseases in Dry Bean Genetic Material and Development of Adaptable Varieties. It is being conducted in collaboration with the Plant Pathology Laboratory, the Laboratory of Genetics and Plant Breeding at Aristotle University of Thessaloniki, and the Hellenic Agricultural Organization "DIMITRA" including the Institute of Industrial & Forage Plants in Larissa and the Department of Plant Protection in Volos.
